Applicant's showing of the current ready availability of the B152, B207, 820, and 827 monoclonal antibodies is noted. Applicant is cautioned that the material required for practice of the method may cease to be known and readily available to the public at some future time. Public access during the term of a patent may affect the enforceability of that patent.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent,

except that an international application filed under the treaty defined in section 351(a) shall have the effects for the purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language;

(f) he did not himself invent the subject matter sought to be patented.

Claims 1-37 are rejected under 35 U.S.C. § 102(a) as being clearly anticipated by Pandian et al. (US 6,627,457).

Claims 1-37 are rejected under 35 U.S.C. § 102(e)(2) as being clearly anticipated by Pandian et al. (US 6,627,457).

Claims 1-37 are rejected under 35 U.S.C. 102(f) because the applicant did not invent the claimed subject matter.

Art Unit: 1641

Pandian et al. disclose and claim the invention identically as instantly disclosed and claimed.

The declaration of Curtis Schrandt, filed 01 June 2004, in the instant application indicates, at item 8 on page 4, that at least Murugan R. Pandian (co-inventor of US 6,627,457) refused to sign the declaration in this application because of an objection to the inclusion of Laurence Cole as a co-inventor. Thus, the examiner considers this as evidence that the instant inventive entity did not invent the claimed subject matter.

A rejection based on double patenting of the “same invention” type finds its support in the language of 35 U.S.C. 101 which states that “whoever invents or discovers any new and useful process... may obtain a patent therefor...” (Emphasis added). Thus, the term “same invention,” in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 1-37 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-37 of prior U.S. Patent No. 6,627,457. This is a double patenting rejection.
